[Windows Movie Maker] Replace the sound track of a video

You have a video and you want to replace the soundtrack with one of your creation for any personal reasons :

Make I use the Windows Movie Maker (it comes with Windows, if this is not the case you can download it here: Windows Movie Maker).
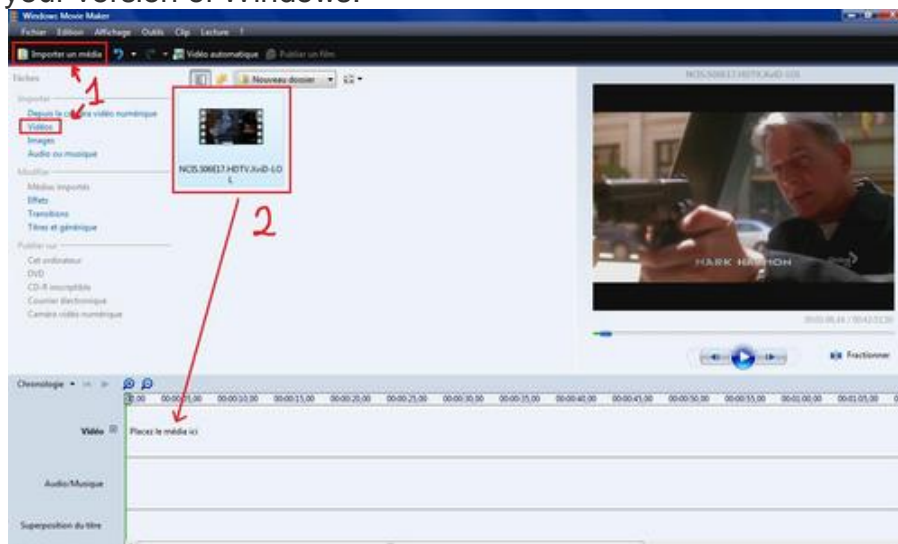

We will proceed in four steps:

- 1 - Import Video

- 2 - Remove the sound of the video

- 3 - Create / Add new audio track

- 4 - Save Video

### Import Video

First, run Windows Movie Maker.
Generally, it is found in Start Menu / All Programs / Accessories but it depends on your version of Windows.

- Start by importing the video. To do this, click on "Import Media" (or directly on the tab "Video").

- Now the video is present in the imported media.

- We will drag in the track "Video."
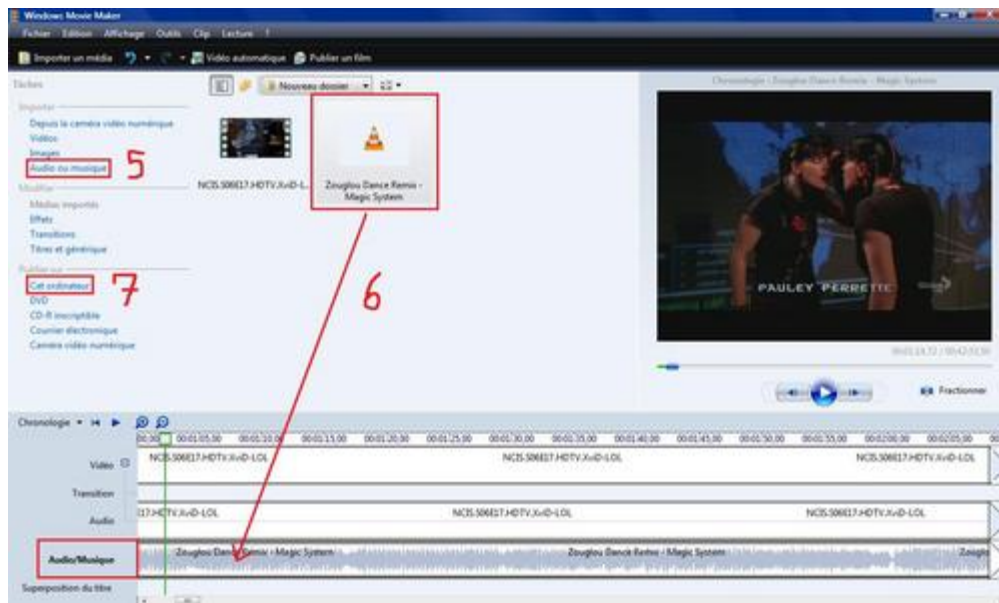

Remove the sound of the video

- We will open the "Video" to show the audio track.

- Now do a right click in the audio track of the video and select the "Mute".

**Create / Add new audio track**

To record your voice if you want to insert in the video, you can use:

- The recorder software of Windows (usually it is in Start Menu / All Programs / Accessories)

- Or an audio editing software like Audacity.

- You save the result in either mp3 or WMA, for Windows Movie Maker compatibility.

- Just as you opened the video, you will open the new audio track.

- Once the files are imported, it will drag in the audio track but this time not of the video, but below ("Audio / Music").

- Just click on "Publish to" This Computer "

Save video

- After "Publish to this computer" this window opens:
  - We must name the video, then choose a location to save it.
  - Then we click on "Next".
- A new window opens:
  - It is advisable to select "Best quality for playback on my computer."
  - Finally, it is "Publish" and the video will be registered.
  - The creation of the video is more or less time depending on the size of the video and the power of your PC.
